

The Stratum-Stack Deploy

Subtitle: The Barrier Repair Transition Plan

Project Owner: [Name]

Project Mission: To migrate the skin's cleansing routine from a high-irritancy state to a stabilized, barrier-healthy state without system failure (purging or inflammation).

Phase 1: The Project Charter (Definition of Done)

This is the non-negotiable starting block. To prevent "skincare scope creep," we define success with technical precision before the first application.

Final Deliverable: A fully deployed, high-compatibility facial cleansing routine.

Definition of Done: > "The [Cleanser Name] is successfully integrated into a twice-daily routine (AM/PM) for 7 consecutive days, resulting in zero (0) instances of stinging, erythema (redness), or post-wash xerosis (tightness), as verified by a 60-second air-dry test on Day 7."

Project Scope: This plan covers the *cleanser* migration only. No other active ingredients (Retinol, Vitamin C, Acids) are to be introduced during this deployment cycle.

Phase 2: Discovery & Safety (The Spot Test)

The goal of this phase is to ensure the asset (product) is compatible with the environment (your skin) before full-scale deployment.

Done	Task	Owner	Due Date	Status
[]	Execute Patch Test: Apply a dime-sized amount to the inner forearm or behind the ear.	User	[Date]	[Pending]

[]	Quality Assurance: Monitor the test site for 24 hours for any inflammatory responses.	User	[Date]	[Pending]
[]	Tech Spec Audit: Verify the product pH level is between 4.5 and 5.5 to match skin acidity.	User	[Date]	[Pending]

Phase 3: Asset Integration (The AM Swap)

The goal of this phase is a "soft launch." We introduce the product in a low-stress environment while maintaining the legacy routine as a backup.

Done	Task	Owner	Due Date	Status
[]	Initiate Soft Launch: Replace the Morning (AM) wash cycle with the new cleanser.	User	[Date]	[Pending]
[]	Maintain Legacy System: Continue using the old "safe" cleanser for the Evening (PM) wash.	User	[Date]	[Pending]

[]	Performance Monitoring: Document any "mid-day shine" or tightness by 3:00 PM.	User	[Date]	[Pending]
-----	---	------	--------	-----------

Phase 4: Full System Launch (The Go-Live)

The goal of this phase is the final migration. We retire the old product and move to 100% utilization of the new asset.

Done	Task	Owner	Due Date	Status
[]	Full Migration: Use the NEW cleanser for both AM and PM wash cycles.	User	[Date]	[Pending]
[]	Interface Testing: Apply follow-up serums; ensure no chemical interaction/stinging.	User	[Date]	[Pending]
[]	Final Stability Run: Complete the 7-day streak to meet the "Definition of Done."	User	[Date]	[Pending]

Phase 5: Post-Mortem Analysis (Debrief)

The "Closed Loop." We analyze the project execution to improve the next skincare "deployment."

Final Result: Did the product meet the "Definition of Done"? [Yes / No]

What Went Well? (Processes to Keep)	What Went Wrong? (Processes to Change)	What Will I Do Next Time?
<i>e.g., "The 24-hour patch test prevented a face-wide reaction."</i>	<i>e.g., "I tested during a week with high wind/cold, which skewed results."</i>	<i>e.g., "I will wait for a 'neutral' weather week for the next product switch."</i>

Project Status: [Active / Complete / Aborted]
